4. Eq8 MSCI SEA Islamic Dividend ETF
5. Phillip Master Islamic Cash Fund

*Actual holdings, allocation, and performance may vary from the model portfolio based on factors such as the amount invested, risk profile, and timing.

FUND MANAGER'S COMMENT

In June, the MSCI Asia Pacific Ex-Japan Index (+5.3% m-o-m) outperformed the MSCI World Index (+4.2% m-o-m), owed largely to South Korea's (+13.9% m-o-m) exceptionalism as its exports rebounded on strong tech demand. Taiwan (+4.3%) was also a winner of the tech revival, as its exports to the US exceeded those to China. Hong Kong (+3.4%) was also up on favorable exports, with news reporting elevated front-loading of shipments as businesses scrambled to beat the July US tariff deadline. At the opposite end of the spectrum, Thailand (-5.2%) struggled to regain its footing, extending losses to -22.2% year-to-date as conditions exacerbated following a political breakup. Indonesia (-3.5%) pulled back after a 2-month rally, as US tariff troubles loomed over its economy, prompting its government to ease import rules ahead of the July deadline.

On the monetary policy front, in June, the Federal Reserve (Fed) held interest rates steady at the 4.25% to 4.50% range during its meeting, as widely expected. Separately, the European Central Bank (ECB) cut interest rates by 25 basis points to 2.00%. The Bank of England (BoE) kept interest rates at 4.25%. In Asia, the People's Bank of China (PBoC) maintained the one-year LPR at 3.0% and the five-year LPR at 3.5%. The Bank of Japan left its key short-term interest rate unchanged at 0.5% during its June meeting. Finally, the Reserve Bank of India (RBI) cut its key repo rate by 50 basis points to 5.50%.

Global markets broadly rebounded in May and June, supported by a 90-day pause on key U.S. tariffs. By late June, only one formal trade deal—between the U.S. and U.K.—had been finalized. While U.S.-China tensions have eased slightly, we believe the overall trade environment remains uncertain, with geopolitical risks in the Middle East flaring up on and off, keeping investors cautious. Separately, on the monetary policy front, major central banks have shifted toward easing in response to softer growth and moderating inflation, though the U.S. Federal Reserve remains an exception, holding rates steady due to concerns over tariff-driven inflation. Although the Fed has maintained its projection for potential rate cuts this year, we believe it would not be surprising if rates remain elevated for longer in order to contain renewed inflationary pressures, given the continued strength of the economy and labor market. Against this backdrop, we emphasize the importance of diversification and a focus on quality amid volatility.

The information contained herein does not constitute an offer, invitation, or solicitation to invest in any product or service offered by Phillip Capital Management Sdn Bhd ("PCM"). No part of this document may be reproduced or circulated without prior written consent from PCM. This is not a unit trust or collective investment scheme and is not an obligation of, deposit in, or guaranteed by PCM. All investments carry risks, including the potential loss of principal. Performance figures presented may reflect model portfolios and may differ from actual client accounts' performance. Variations in individual clients' portfolios against model portfolios and between one client's portfolio to another can arise due to multiple factors, including (but not limited to) higher relative brokerage costs for smaller portfolios, timing of capital injections or withdrawals, timing of purchases and sales, and mandate change (e.g., Shariah vs. conventional). These differences may impact overall performance. Past performance is not necessarily indicative of future returns. The value of investments may rise or fall, and returns are not guaranteed. PCM has not considered your investment objectives, financial situation, or particular needs. You are advised to consult a licensed financial adviser before making any investment decisions.
