"The portfolio performance is based on a composite of all individual portfolios under the same mandate type and does not represent any specific portfolio. Returns are calculated using a composite Time-Weighted Rate of Return (TWRR), with individual portfolio returns weighted by their beginning-of-period asset values to account for varying portfolio sizes and cash flows. For more details on how the composite return is derived, please refer to the article titled "Understanding Private Mandate" on www.phillipinvest.com.my.

COUNTRY ALLOCATION

*Actual holdings and allocation may vary from the model portfolio based on factors such as the amount invested, risk profile, and timing

- 4. Eg8 South East Asia Islamic Dividend
- 5. Phillip Master Islamic Cash Fund

*Actual holdings and allocation may vary from the model portfolio based on factors such as the amount invested, risk profile, and timing.

FUND MANAGER'S COMMENT

The MSCI Asia Pacific Ex-Japan Index (+3.7%) charted another month of outperformance against the MSCI World Index (+1.9%), largely in part due to semiconductor exceptionalism that benefited supply chain names in Asia Pacific. South Korea (+19.9%) placed first for the second month in a row, with 3Q GDP expanding at the fastest pace in 1.5 years along with positive developments on its trade deal with the US. The semiconductor buzz also rallied Taiwan (+9.3%) as its exports reached record highs in recent months together with a renewed bullish outlook for cutting-edge chips. India (+4.5%) climbed back to record-high levels as festive season demand and a pivot back to a net buyer position by foreign investors helped to boost sentiment. Hong Kong (-3.5%) pulled back after five consecutive months of strong gains, likely triggered by a less-than-expected compromise from the US on trade negotiations. The Philippines (-0.4%) and Malaysia (-0.2%) ended October largely flat to slightly negative as investors remained mixed on the outcomes of the recent ASEAN Conference.

The recent Xi-Trump meeting at the APEC summit marked a "transactional truce" in US-China relations. easing trade tensions and halting the momentum toward economic decoupling. This development sets the stage for a more stable geopolitical environment heading into 2026. Meanwhile, the Federal Reserve cut rates by 25bps in October to 3.75–4.00%, with markets expecting one more cut to bring the federal funds rate to 3.50–3.75% by end-2025, though future moves remain data-dependent. US equities continue to draw support from robust technology earnings, but elevated valuations may limit upside potential. While concerns about a sustained US government shutdown persist, markets have largely discounted its impact given past precedents. In Asia Pacific, improved liquidity could offer some tailwinds, though global growth and policy uncertainties may weigh on sentiment. We maintain a barbell strategy through 2025, combining quality growth opportunities with defensive income assets to navigate potential volatility.
