*The portfolio performance is based on a composite of all individual portfolios under the same mandate type and does not represent any specific portfolio. Returns are calculated using a composite Time-Weighted Rate of Return (TWRR), with individual portfolio returns weighted by their beginning-of-period asset values to account for varying portfolio sizes and cash flows. For more details on how the composite return is derived, please refer to the article titled "Understanding Private Mandate" on www.phillipinvest.com.my.

**Effective 1 September 2023, the benchmark of FBM EMAS Shariah is changed to Target Return of 5.0% p.a.

FUND MANAGER'S COMMENT

Data as of 31 May 2026

Malaysia is expected to maintain a gradually stabilising, though still cautious, macro backdrop in June as global volatility continues to moderate. However, external demand remains uneven, with mixed growth signals from the US and China continuing to affect export momentum and the ringgit. Domestic demand remains the key support, underpinned by resilient household spending and stable labour market conditions. Against this backdrop, we stay constructive on selected domestic-oriented sectors, especially those linked to rising electricity demand from data centre expansion and continued momentum in renewable energy investment. We are also increasingly positive on the technology sector as visibility in order flows improves, supported by sustained AI-related capex from global leaders. Accordingly, our strategy continues to favour a barbell approach anchored on large-cap, high-quality companies with strong balance sheets and reliable dividend yields, while selectively complemented by exposure to firms with clear earnings growth potential from structural thematic drivers.

Recent developments in the Middle East, including reported progress in maintaining a conditional ceasefire between Iran and the United States, have helped ease some geopolitical tensions and support a more stable risk backdrop into mid-2026. This gradual improvement in global risk sentiment is constructive for broader markets, particularly for manufacturing and semiconductor equipment sectors, which continue to be underpinned by strong structural demand from AI infrastructure, data centre expansion, renewable energy deployment, and advanced memory technologies such as DRAM and HBM. While near-term volatility arising from Middle East-related supply chain risks may persist, we view such episodes as opportunities for disciplined long-term positioning. Although sector leadership continues to be driven by AI infrastructure and its global supply chain beneficiaries, the market is becoming increasingly selective as valuations turn more demanding. In this environment, we believe a barbell strategy that combines growth and income exposures, alongside broader diversification, remains well positioned to navigate volatility stemming from potential energy shocks, renewed inflationary pressures, and lingering uncertainties surrounding US tariff policies.
